DWARFED FRUITS

When ordinary standard varieties are grafted on very special "dwarfing" stocks the resulting trees never grow very large—but blooms and bears very heavily indeed and at an early age. We have available this year a large supply of true dwarfed fruits in all varieties as listed below. They may be used if you wish to train your own Espaliers—all good Espaliers are on dwarfing stocks.

YOUNG ARISTOCRATS

Unusual and rare varieties . . . true-to-name because they are grafts and cuttings . . . easy to grow because they have already passed a season out-of-doors. No winter protection is needed, nor other special treatment. All Balled and Burlapped for still easier handling. (Except items marked B. R.) This is an amazing opportunity to plant rare and delightful evergreens, trees, and shrubs at little cost. (Weight 1 to 3 pounds each.) F.O.B. Long Island.

Start Your Own Nursery. Wise old gardeners, you will notice, always have a few rows of trees and shrubs growing for future plantings. Even if your garden is planted with ordinary background shrubs and specimens, why not set aside among your flower-beds enough space here and there to plant a young aristocrat? In a few years, when larger, it can replace an inferior specimen.

Due to labor shortage, one Young Aristocrat cannot be sold alone—but 5 mixed at the 5 rate, 25 mixed at 25 rate.

Young Hardy Hybrid Rhododendron from Cuttings

Highly Successful New Method

Named Hybrids from cuttings result in a well-budded growth, quick and full of vitality. A 1-year field grown plant makes a vigorous branched growth. Also, being own-root is harder in the north than a graft. F.O.B. Maryland.

YOUNG NATIVE ARISTOCRATS Rhododendrons for as low as 25c

SIZE 1: AS SMALL AS CAN BE SHIPPED SAFELY. 12 to 15 in. (Ball) Plants—1 to 3 Stems

This special "Young Aristocrat" grade measures 12 to 15 inches with a small ball, weighing one or two pounds only. This stock is not to be compared for a minute with ordinary collected plants. It is on the contrary all carefully dug, the greatest pains being taken to preserve the roots. Carefully packed, it is easily planted and makes a quick start. Shipped from North Carolina, yet express runs only about 6c each (in 100 lots).

SIZE 2: AS SMALL A PLANT AS LOOKS SHAPELY. 12 to 15 in. B&B, Clumps, 4 to 6 Stems

These might be called "Junior Specimens." The ball weighs about 5 pounds per plant, individually burlapped. They are 2 years older than Size 1. Express runs about 20 cents per plant. You can expect some blooms the year after planting. These really "look like something" the day they are planted.

A PRACTICAL FOREST-CROP PLAN

To give some rough idea of what is possible, we here outline a use for idle acres that will at least pay taxes and interest: Fun and health, too.

Total Cost: Planting 4800 trees to the acre, about \$75 for trees and \$75 for planting. (Say \$150).

Crop A: Christmas Trees. 3600 trees in 10 years, value about 50c wholesale. A gross return of \$1800.

Crop B: Pulpwood. 800 trees in 20 years, say 30 cords at about \$4. A gross return of \$120.

Crop C: Timber. 400 trees left 12 ft. apart for your grandchildren. Worth in 40 years about \$400. an acre at present prices.

Evergreen Seedlings ("S")

Should be planted about four inches apart in beds. Here they are left two years and for the first year, during the heat of the first Summer, should be shaded by a lath screen.

Transplants ("X")

Evergreens that have been moved, or have had their roots pruned, form a close compact ball of fibrous roots. To be planted out in the open field in rows.

Small Deciduous Trees

Deciduous trees and shrubs need pruning back upon planting. With deciduous shrubs cut to the ground upon setting them out. Trees with a single stem; prune off side twigs when planting, and then a month later go over the planting again and cut away all but one single stem.

SUGGESTED VARIETIES

Timber

Spruce and Pines
Black Locust (posts)
Ash and Hickory (handles)
Walnut, Liriodendron, (cabinet)

Pulpwood

Norway Spruce
White Spruce
Red Pine
Scots Pine
Poplars

Xmas Trees

Norway Spruce
White Spruce
Douglas Fir
Balsam Fir
Colorado Spruce

A. TIMBER—12 ft. apart (402 to acre). Leave 40-50 years. Meanwhile:—

B. XMAS TREES on same land set 3 ft. apart (3630 to acre). 10 years.

C. PULPWOOD — Six feet apart (808 to acre). Crop, 20 years.

Mixed planting, including hardwood, reduces fire risk, minimizes diseases, increases cash return and diversifies. Total, 4840 per acre.

Plants to prevent erosion on Steep Banks

Eventually one plant will cover a large area, but on banks it is important to get the soil held quickly. We suggest bad steeps be planted 18 inches apart each way—gentler slopes 2 feet.

BARGAINS IN LARGER SHADE TREES

Those who want quick results yet not have to pay for full specimens can here select from the best kinds of trees at enormous savings. We offer nice, well-rooted, transplanted stock between 4 and 8 feet high. They are young and transplant more easily and grow more vigorously than older stock. Yet you save 2 to 4 years over small seedling sizes at little extra cost. Packing included if cash accompanies your order.

NORWAY SPRUCE	2½ to 3 ft. B&B	1.80
COLORADO SPRUCE (GREEN)	3 to 4 ft. B&B	2.00
COLORADO (BLUES)	3 to 4 ft. B&B	2.70

Huge Hybrid Blueberries

(*Vaccinium corymbosum* named varieties)

Here's Beauty that Pays a Profit

Really beautiful as specimens or in hedges. Suited for use in small quantities in the small garden. A 100-foot hedge will pay about \$25 worth of berries a year! (Spaced 18 inches.) These were developed by the late Dr. Frederick Coville of the U. S. Dept. of Agriculture.

Why Wait? Plant Some NOW!

And enjoy the berries sooner. Not only will they add beauty to your garden but each bush will pay for itself many times over! Hardy Zone III.

Cabot—Early, broad spreading bush. Home use.

Concord—Hardy, upright, midseason. Fine quality. Large.

Jersey—Latest and largest berry. Hardest. Best shipper.

June—Erect bush. Earliest, dark blue berries.

Rancocas—Early, good quality. Good shipper.

Rubel—Late. Tallest, most erect. Good shipper.

Stanley—Finest quality of all. Light blue. Spreading.

Burlington (add 15c per plant to prices above)—Newest named kind. Later than all others. Good shipper. Large. Good quality.

Look at this bush!

Dwarf (about 4 feet high) and neat with clean bark and leaves.

Ornamental thru 4 seasons:

Spring:—A mass of clustered white and pink bells.

Summer:—Loaded with handsome blue berries.

Fall:—Brilliant colored leaves.

Winter:—Bright gray and red twigs.

Needs only an acid soil

Blueberries require an acid soil containing peat or other rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage so that the roots can get air during the growing season.

Prune for Heavy Yield

You will get fruit if you just leave 'em alone. But more and larger if you cut out all old canes, and keep new shoots coming. Also when in bloom cut away about half each flower cluster. Fertilize in May.

Hardy Nut-Trees

BLIGHT-RESISTANT CHESTNUTS

Chinese Chestnut (*Castanea mollissima*). Similar to the dying American, of fine flavor, and sweet. It is insured to the Chestnut blight. Lives and bears Zone V.

—Seedlings—transplant 3-4 feet.....25 for \$25.00

—Grafted Trees. Better nut-bearing. Bear as soon as apples. Varieties Carr, Zimmerman, Connecticut Yankee, Hobson.

CHESTNUTS BEAR YOUNG

Photo: Chinese Chestnut 41 inches tall (3-4 ft.) taken autumn, 1939.

There are 18 burs, each containing 3 nuts. 54 chestnuts on a baby tree!

BLACK WALNUTS—Zone IV

One of our most beautiful native trees, growing well in any fertile well drained soil. The grafted sorts bear their first nuts commonly in the third to fifth year.

Stabler meat falls out easily in halves or one piece and is of a rich mellow flavor. A fine spreading specimen.

Thomas is a rapid-growing tree. The meat is attractive and tasty, but does not crack as easily as the Stabler.
